ACCURATE THERMAL SYSTEMS HEPA AIR FILTRATION UNIT

MODEL DCS2500 **AIR FILTRATION SYSTEM APPLICATIONS** Filtering of exhaust air Captures oil mist, smoke and fumes 8" OD Exhaust from Fluidized Bath tool plenum cleaning and other extrusion operations Powder coat painted for long life Remove smoke, fumes, Common filter sizes that can be VOC's and other fine purchased from many sources Activated Carbon particulate 2 off 24" x 24" x 8" **Refillable Canisters** air flow **BENEFITS** 1000 cfm of flow for best results Common filter sizes that can be easily replaced by 99.97% HEPA Filter side access panels 24" x 24" x 12" Plastic Extrusion and Injection Molding Oil mist impinger filters companies to remove fine particulate, can be washed out for MERV 11 Prefilter 24" x 24" x 4" reuse

Sump base has a drain for collection of any oil

Available in vertical or horizontal configuration

Designed and manufactured in USA Oil Mist Impinger 2 off 24" x 24" x 2" Aluminum filters

Sump Base

8" OD inlet plenum • Easy access panels for filter replacement

•Large 8" diameter inlet and outlet for best

•Use an exhaust blower capable of 850 to

The DCS2500 has been designed for use by smoke and fumes from the exhaust stream of plant operations including tool cleaning in Fluidized Temperature Baths. The DCS2500 does not require any power, natural gas or continuous water supply to operate. Contact us for technical details and drawings on how to connect and plumb up the system.

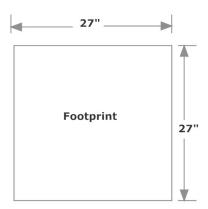

Unique Solutions for Thermal Applications

PH: 609-326-3190

MODEL DCS2500

FEATURES AND SPECIFICATIONS

The DCS2500 has a relatively small footprint as shown but is 108" long. In the horizontal configuration it can be mounted to a wall and in the vertical configuration it can be free standing. It is ordered in either configuration that best suits your space and layout considerations. Three feet of clearance is needed on the inlet side of the system to open the filter access panels.

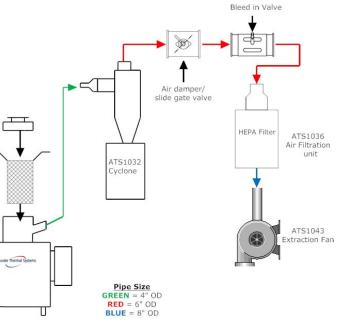

Shown here is a typical system layout and plumbing for a Fluidized Temperature Bath system. Other plant operations where it is desirable to have exhaust air filtered can also be tied into the system.

Call us with your application questions!

Specifications & Ordering info

	DCS2500
Overall System footprint	27"W x 27"D x 108"H
Extraction blower air flow required	750 to 1000 CFM
Maximum air inlet temperature	160°F / 70°C
Shipping weight	800 lbs
Filter Details	
Oil mist impinger (2 required)	Aluminum mesh, 24" x 24" x 2"
Prefilter (1 required)	Merv 11, 24" x 24" x 4"
HEPA filter (1 required)	99.97%, 24" x 24" x 12"
Activated carbon canister (2 off)	24" x 24" x 8" (each canister
	contains 45 lbs of granular
	carbon that can be refilled)
Order code - Horizontal Configuration	ATS1036-HOR
Order code – Vertical Configuration	ATS1036-VERT

Accurate Thermal Systems

WHAT'S INCLUDED

-Powder coat painted cabinet and filters in each section. -8" OD inlet and outlet plenums -Instruction manual

WHAT DO I NEED TO RUN THE SYSTEM

-750 to 1000 CFM blower that is placed on the outlet side of the system drawing exhaust air into the filters.
-At least 9 feet of vertical or horizontal space to install the system
-We recommend
www.ductincorporated.com for piping, transition fittings, slide valves (dampers) and bleed in valves.

SERVICES AVAILABLE

-Technical support -Application support -Maintenance
